CONSUMPTIVE USE CALCULATION:

The total water for transfer to Roza is based on the published WIG numbers for clover as best representing Timothy hay plus 5 inches for a total of 24.10 inches per acre \times 347 acres = 8,362.70 inches / 12 /.94 (factor for return flow in the Roza system) = 741.37 acre - feet of consumptive use. This same formula was used for a transfer made from the Teanaway River to Roza in 2001.

NARRATIVE DESCRIPTION OF PROJECT:

This is a proposed temporary transfer from the TRROA organization in the Teanaway Valley to the Roza Irrigation District for the 2005 growing year. The total available for transfer is 741.37 acre - feet.
